

Basic Postemergence Control at an Economical Price

PasturAll[®] HL Herbicide

PasturAll[®] HL herbicide offers basic postemergence control of a broad spectrum of broadleaf weeds at an economical price.

PasturAll HL provides quick knockdown of broadleaf weeds and enhanced, more consistent control compared to 2,4-D alone.

At 1.5 pints per acre, PasturAll HL is an effective option for foliar broadleaf weed control with no grazing restrictions.

Application Methods

- Apply after weeds emerge but before they start to bolt or flower.
- For ground broadcast application, use a spray volume of 10 or more gallons per acre.
- Use of a nonionic surfactant (NIS) at the recommended rate (0.25% V/V) can help with post-emergence control if the plants are stressed with drought or other difficult growing conditions.

Product Attributes

- Foliar broadleaf weed control more robust than 2,4-D and/or dicamba mixes
- Fast knockdown of broadleaf weeds
- Lower effective use rate, resulting in more acres per jug, than 2,4-D alone
- No grazing restrictions for any class of livestock

Key Weeds Controlled

Broadleaf Weeds and Plants Including:	
Common Broomweed	Annual Morningglory
Common Cocklebur	Mustards (except blue mustard)
Woolly Croton	Common Primrose
Thistle	Common Ragweed
Horseweed (Marestail)	Shepherdspurse
