

Enversa™

HERBICIDE

Bringing innovation to the soybean herbicide market

Corteva Agriscience™ has a proven track record of innovation with our strong portfolio including Sonic® and Trivence® herbicides and we're adding to it.

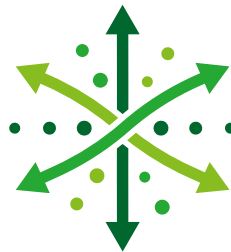

Pending regulatory approval, Corteva will introduce Enversa™ herbicide, a new soybean and cotton herbicide with anticipated first sales in 2024. Enversa is a residual herbicide with a proprietary formulation of encapsulated acetochlor (Group 15) to handle some of the toughest hard-to-control broadleaf and grass weeds that farmers face today. This is the first soybean and cotton herbicide solution in the Corteva Agriscience portfolio to feature encapsulated acetochlor. Enversa will also be the **preferred residual tank-mix partner of choice with Enlist One® herbicide.**

Enversa™ herbicide

Novel formulation

- **Proprietary** acetochlor (Group 15) formulation for residual control of tough to control weeds
- **Microcapsules** move quickly from the leaf surface and drive to the soil creating strong residual control
- **When sprayed** on leaf surface, it will delay release to reduce crop injury

Versatility

- **Crop application flexibility** for use on corn¹, cotton, sorghum, and soybeans²
- **Wide application window** to help navigate challenging weather conditions
- **Great handling** and tank-mix compatibility

¹ Field, production seed, silage and popcorn

² Pending label submission for additional use on peanuts and sugarbeets

Effective Weed Control

- **½ inch of moisture** needed for activation
- **Program approach** with other Corteva Agriscience™ soybean herbicides such as Sonic, Trivence, and Enlist One herbicides
- **Residual control** of hard-to-control weeds like: waterhemp, Palmer amaranth, and grasses

Excellent crop safety

- **Encapsulated acetochlor** for increased crop safety
- **Higher yield potential** due to less crop response
